

# Autodesk® Inventor® Eco Materials Adviser

## Recommended Workflow for Students

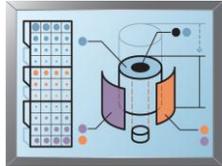

**#1:**

- **Establish design requirements and environmental priorities**
- Understand environmental goals , performance requirements, and how the product will be used

**#2:**

- **Set baseline materials and processes**
- Identify parts to investigate, assign materials and processes, establish a baseline

**#3:**

- **Search for alternatives**
- Browse, search, reference material datasheets

**#4:**

- **Weigh trade-offs of alternative materials and processes**
- Apply alternate materials, compare results, develop reports

**#5:**

- **Make and document the material choice**
- Apply changes, make any resulting design changes, embed data in your model
